

British Nature Guide

Bluetit drawing and factsheet

Draw your own Bluetit in the box below and colour it in.

Bluetit facts

Bluetits are very small. When fully grown they weigh slightly more than a 50p coin. They eat small insects, seeds and like to peck tiny pieces from peanuts.

Bluetits are one of our most common birds and visit most parks and gardens. They often nest in boxes in gardens. Male and female Bluetits look the same.

The words below are all colours you can see on this Bluetit. Fill in the missing letters to find the colours.
