

British Nature Guide

Dragonfly drawing and factsheet

Draw your own dragonfly in the box below and colour it in. Don't forget to draw the wings, a body, legs, a head and two big eyes. Then draw the young dragonfly in the box below its picture.

Dragonfly facts

Dragonflies have four wings. Birds only have two.

Dragonflies are hunters. They feed on small flies that they catch in the air.

When they are young they look different. They live under water in ponds. In the summer they climb out of the water and they turn into adult dragonflies.

Below you can see what a young dragonfly looks like.
