## Slugs

**Slugs live in damp places. They look shiny and feel slimy.**

**Their eyes are at the end of two stalks sticking out of their heads. They don't breathe through their mouths like we do. They breathe through a hole in the side of their neck. If they stay in the sun for long they will die.**

**That is why most slugs come out at night to eat plants.**

**Draw  
a slug  
in the  
empty  
box.**
